Section -II

Reading

Isaac's playmates were **enchanted** with his new windmill. They thought that nothing so pretty, and so wonderful, had ever been seen in the whole world.

"But, Isaac," said one of them, "you have forgotten one thing that belongs to a mill."

"What is that?" asked Isaac; for he supposed, that, from the roof of the mill to its foundation, he had forgotten nothing.

"Why, where is the miller?" said his friend.

"That is true!—I must look out for one," said Isaac; and he set himself to consider how the deficiency should be supplied.

He might easily have made the **miniature** figure of a man; but then it would not have been able to move about, and perform the duties of a miller. But perhaps some two-legged millers are quite as dishonest as this small quadruped.

As Isaac grew older, it was found that he had far more important matters in his mind than the manufacture of toys, like the little windmill. All day long, if left to himself, he was either absorbed in thought, or engaged in some book of mathematics, or natural philosophy. At night, I think it probable, he looked up with reverential **curiosity** to the stars, and wondered whether they were worlds, like our own,—and how great was their distance from the earth,—and what was the power that kept them in their courses. Perhaps, even so early in life, Isaac Newton felt a presentiment that he should be able, hereafter, to answer all these questions.
