3.3 Division of Algebraic Expressions

In the previous sessions, we have learnt how to add, subtract and multiply algebraic expressions. Now, we are going to learn about another basic operation **'division'** on algebraic expressions. We know that the division is the reverse operation of multiplication.

Now, the cost of 10 balls at the rate of ₹5 each $= 10 \times 5$

$= ₹50$

whereas if we have ₹50 and we want to buy 10 balls then,

the cost of each ball is $= \frac{50}{10}$

$= ₹5$
